TirthNow

# Project Status Report

Tirth Now — Braj pilgrimage super-app · Work completed and work pending
Date: 19 October 2026 · Branch `claude/peaceful-fermi-hvmzt4`

| 4 of 7 | 16 | ~160 | 475 |
|---|---|---|---|
| phases done (0–3) | backend modules | API endpoints in the OpenAPI spec | automated tests passing |

## 1. Summary

The backend API, the marketing website and the pilgrim mobile app (Android, iOS and web) are built and run end to end with **test versions of every outside service** (test OTP `123456`, test payments, test SMS/AI/maps). The brand has been updated to the final navy and saffron logo across the website and app. An installable Android APK is built automatically on GitHub, and the API has a ready-made setup for Render.

**What is needed to go live:** the real accounts listed in section 6 (Firebase, Razorpay, SMS, Google Play/Apple, hosting), a successful Render deployment, and the vendor and admin portals (Phases 4–5).

## 2. Phase overview

| Phase | Scope | Status |
|---|---|---|
| 0 | Architecture documents, data model, decision records (ADRs), repo layout | **Done** |
| 1 | Foundation: monorepo, Docker, NestJS skeleton, database schema and seed data, login, CI | **Done** |
| 2 | All backend modules, real-time updates, background workers | **Done** |
| 3 | Pilgrim mobile app (Flutter) | **Done** |
| — | Marketing website + Yatra Journey + brand refresh (extra work) | **Done** |
| 4 | Vendor portal (hotels, cabs, restaurants manage listings, orders, payouts) | **Not started** |
| 5 | Admin portal (approvals, moderation, refunds, reports) | **Not started** |
| 6 | Hardening and release (security review, load testing, store submission) | **Not started** |

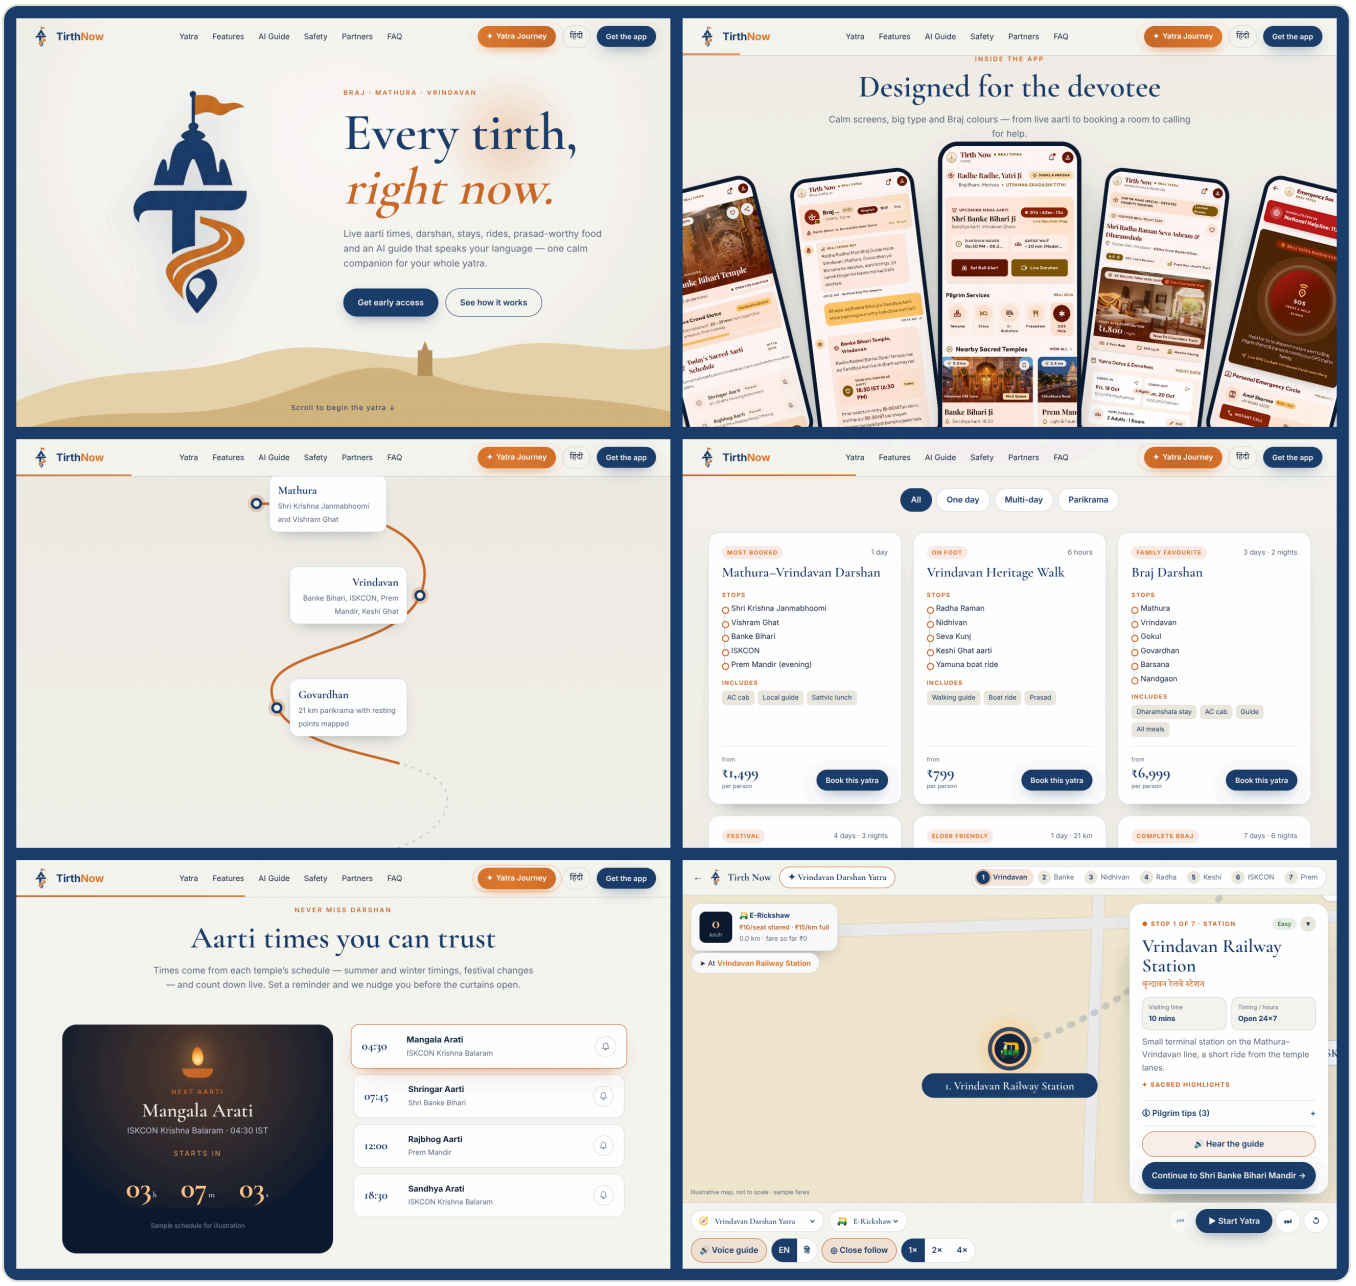

## 3. Work completed

### 3.1 Backend API (Phases 1–2)

| Area | What it does |
|---|---|
| Accounts & login | Phone OTP and guest sign-in, secure tokens that rotate, roles (pilgrim, vendor, admin), account deletion |
| Temples & aarti | Temples, cities, aarti schedules (seasonal and festival changes), festivals, crowd levels, reminders |
| Bookings | Hotels/dharamshalas, cabs (fare quotes), restaurants, experiences — with availability, holds and cancellation rules |
| Payments | Razorpay-ready checkout, refunds, a double-entry ledger, platform commission + GST, vendor payouts |
| Safety (SOS) | Emergency alert with live location share link, emergency contacts, nearby police/hospital directory |
| AI guide & planner | Chat guide with sources (aarti times only from the database, never invented), voice in/out, temple photo recognition, day-by-day trip planner |
| Other modules | Reviews, reels (short videos), notifications (Hindi + English), weather, trains, file uploads, admin tools, live updates |
| Quality | 326 unit tests + 123 end-to-end tests; every outside service has a real and a test version |

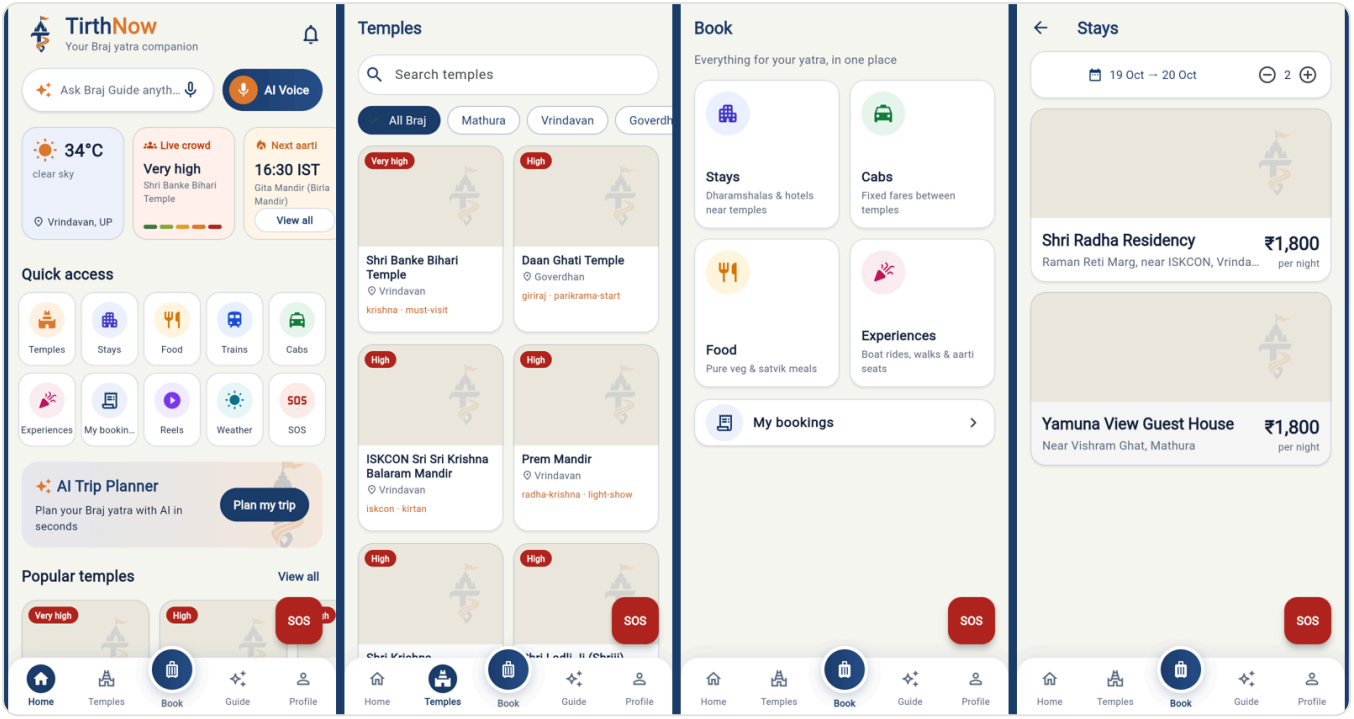

## 3.2 Marketing website

| Feature | Details |
|---|---|
| Main site | Scroll animations, features, AI guide, safety, partners, FAQ, Hindi/English, works on phones; deploys on Vercel |
| Yatra packages | One-day, multi-day and parikrama packages with prices, live darshan section, local services |
| Yatra Journey page | Interactive route map of the yatra with vehicle choice, fares, stop details and a voice guide narrating in English and Hindi |
| Brand refresh | Navy + saffron colours from the final logo, new favicon and icons, real app screenshots in the "Inside the app" section |

## 3.3 Mobile app (Phase 3)

| Screen / feature | Status |
|---|---|
| Sign-in (phone OTP or guest), Hindi/English | **Working** |
| Home — redesigned: guide search, AI voice, weather/crowd/next-aarti cards, quick access grid, trip planner banner, popular temples | **Working** |
| Temples — grid with crowd badges, filters, search; temple page with aarti schedule, countdown, reminders, directions, reviews | **Working** |
| Book — stays, cabs, food, experiences; checkout; my bookings with cancel + refund | **Working** |
| SOS — hold-to-alert, location share, call 112, nearby help, emergency contacts (works signed out) | **Working** |
| Braj Guide chat (streaming answers, voice, read aloud, identify temple by photo) and Trip Planner (share, PDF) | **Working** |
| Notifications, reels feed, weather & trains, profile | **Working** |
| Brand: logo, app icons (Android, iOS, web), splash screen, navy/saffron theme, raised centre "Book" button | **Done** |
| Tests: 26 unit/widget tests + 10 tests against the real API | **Passing** |

## 3.4 Build & deployment

| Item | Status |
|---|---|
| CI on GitHub: lint, type checks, tests, API spec check, mobile checks | **Done** |
| Downloadable Android APK built on GitHub Actions ("Mobile APK" workflow) | **Working — first build succeeded** |

| | |
|---|---|
| Render setup file ( `render.yaml` ) + guide ( `docs/DEPLOY_RENDER.md` ) | **Region issue fixed — waiting for you to recreate the database and Redis and redeploy** |
| Website on Vercel | **Deployable** |

# 4. Pending work

## 4.1 Development work still to do

| # | Item | Notes |
|---|---|---|
| 1 | Vendor portal (Phase 4) | Onboarding/KYC, listings and calendars, order inbox, payouts, review replies |
| 2 | Admin portal (Phase 5) | Vendor approval, content moderation, refunds, reports |
| 3 | Hardening & release (Phase 6) | Security review, load tests, monitoring (Sentry), store submission |
| 4 | Restyle remaining app screens | Temple page, hotel page and Profile in the new detailed style |
| 5 | Push notifications on the phone | Needs the Firebase project |
| 6 | In-app map | Cab pickup/drop on a map; needs a Google Maps key |
| 7 | Live order/cab updates in the app | Server supports it; app currently uses pull-to-refresh |
| 8 | Reel upload from the app | Feed, likes and comments already work |
| 9 | Possible start-up crash with unusual phone language settings | Seen in the web preview; small fix |
| 10 | Remove the AI link from one old commit message | Needs your permission to rewrite branch history |

## 4.2 Deployment steps waiting on you

| Step | Where |
|---|---|
| Delete *tirthnow-db* and *tirthnow-redis*, then Manual sync the Blueprint and redeploy the API | Render dashboard |
| Add variable `MOBILE_API_BASE_URL` = `https://tirthnow-api.onrender.com`, then run "Mobile APK" | GitHub → Settings → Actions variables |
| Set `CORS_ORIGINS` to the website address | Render → tirthnow-api → Environment |

# 5. Content and photos

| Item | Why |
|---|---|
| Real photos of temples, hotels and restaurants | Cards currently show the logo as a placeholder |
| Verify every temple's location and aarti time | Seed data must be checked with each temple before launch |
| Logo as an SVG (vector) file | Icons are cut from a picture; SVG keeps them sharp |
| Privacy policy, terms, refund policy (DPDP Act 2023) | Required for app stores and payments |

## 6. Accounts needed for going live

| Account | Used for |
|---|---|
| Firebase project | Real phone OTP login, push notifications |
| Razorpay (KYC, Route) | Real payments and vendor payouts |
| MSG91 + TRAI DLT registration | SMS for SOS and bookings |
| WhatsApp Business (Meta) | SOS and booking messages |
| Google Play Console / Apple Developer | Publishing the app |
| Google Cloud (Maps, Speech, Vision) | Maps, voice, temple photo recognition |
| Anthropic (Claude) + OpenAI (embeddings) | Real AI guide and planner |
| Cloudflare R2 / Stream | Photo and video storage, reels |
| OpenWeather, train-search partner | Live weather and trains |
| Hosting (Render or Google Cloud), Sentry, email provider | Running the API, error tracking, emails |

Full list with setting names: `docs/CLIENT_SETUP_TODO.md`. Until each account is added the app keeps using its test version, so everything can be demonstrated today.
